

# Amazon S3 Bucket Creation and hosting a website:

## Step 1: Create an AWS Account

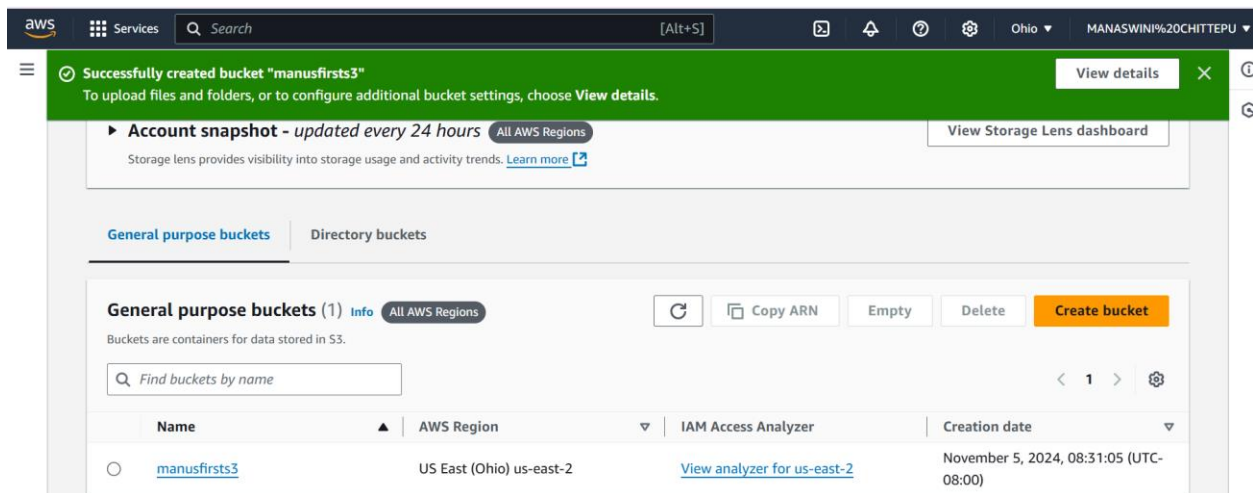

- Go to [aws.amazon.com](https://aws.amazon.com) and sign up for an account.
- Follow the instructions to complete your registration.

## Step 2: Access the S3 Service

- Once logged into AWS, go to the **Services** menu and search for **S3**.
- Click on **S3** to open the S3 Dashboard.

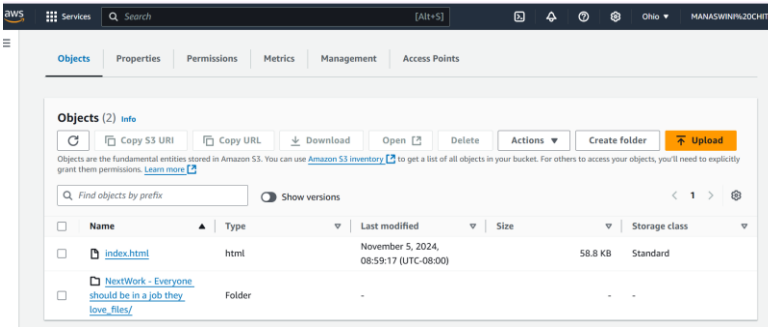

## Step 3: Create an S3 Bucket

- In the S3 Dashboard, click the **“Create bucket”** button.
- Enter a **unique name** for your bucket (each name must be globally unique).
- Choose a region (the default is fine for most users).
- Leave the default settings as they are and click **“Create bucket”**.

## Step 4: Upload Files to Your Bucket

- Click on the bucket you just created to open it.
- Press the **“Upload”** button.
- Click **“Add files”** and select the files from your computer that you want to upload.
- Once selected, click **“Upload”** to store the files in your bucket.

## Step 5: Set Permissions (Optional)

- By default, your files are private.
- To make a file public (if needed), click on the file, go to the **“Permissions”** tab, and change the settings to allow public access.

## Step 6: Access Your Files

- Click on the file you uploaded, and you’ll see its URL.
- Copy that link, and you can use it to access the file from anywhere.
